ABSTRACT: The integration of ChatGPT, an AI-driven language model, presents a myriad of benefits for English teachers seeking to enhance their instructional practices. This article explores the advantages afforded by leveraging ChatGPT in educational settings. Firstly, ChatGPT serves as a versatile tool for generating diverse and contextually relevant learning materials, including prompts, quizzes, and writing exercises, tailored to students' proficiency levels and interests. Secondly, it facilitates personalized feedback by analyzing students' responses in real-time, identifying areas for improvement, and offering targeted suggestions to foster language acquisition and mastery. Moreover, ChatGPT functions as a virtual assistant, augmenting teachers' administrative tasks through automated grading, lesson planning support, and curriculum enrichment. Additionally, it fosters interactive and engaging learning experiences through its conversational interface, promoting active student participation and collaboration. Furthermore, ChatGPT can aid in fostering cultural understanding and global awareness by providing access to diverse perspectives and authentic language usage from around the world. Lastly, its continuous learning capabilities enable adaptation to evolving pedagogical needs and linguistic trends, ensuring relevance and effectiveness in English language instruction. In conclusion, the integration of ChatGPT empowers English teachers with innovative tools and resources to create dynamic, personalized, and impactful learning environments, ultimately advancing students' language proficiency and fluency.

KEYWORDS: Positive, Impacts, Benefits, Chat GPT, English teachers, Educational settings

I. INTRODUCTION

ChatGPT is an AI chat assistant developed by OpenAI, providing users with a tool to find information, answer questions and support tasks quickly and accurately. ChatGPT is considered one of the most advanced language models today with the ability to automatically learn and work with large types of data. It is equipped with outstanding features such as automating conversations, answering questions, generating automatic answers and improving the model's self-learning capabilities. All your questions and concerns, no matter what field you have, will be answered fluently and completely by ChatGPT in just a snap. ChatGPT covers all creative and artistic tasks such as writing poetry, composing music, writing letters, designing and even creating or fixing errors in programming. In recent years, the integration of artificial intelligence (AI) technologies into education has garnered significant attention. Among these technologies, ChatGPT, a conversational AI developed by OpenAI, has emerged as a promising tool for English language educators.

II. LITERATURE REVIEW

One of the primary benefits of ChatGPT for English teachers lies in its ability to provide students with ample opportunities for language practice. By engaging in natural language conversations with ChatGPT, students can improve their speaking, listening, reading, and writing skills in an interactive and immersive manner (Brown & Natoli, 2020). Moreover, ChatGPT can generate personalized feedback tailored to students' responses, facilitating targeted language instruction (Rajendran & Liu, 2021). ChatGPT's adaptive nature allows it to cater to the individual learning needs and preferences of students. English teachers can leverage ChatGPT to offer personalized learning experiences by generating custom-made exercises, quizzes, and tutorials based on students' proficiency levels and learning goals (Sahni & Tyagi, 2021). This individualized approach fosters student engagement and motivation while addressing their specific language learning challenges (Zhong & Chow, 2020). ChatGPT can serve as an effective tool for assessing and evaluating students' language proficiency and performance. English teachers can utilize ChatGPT to administer automated language tests, quizzes, and examinations, providing instant feedback and performance analysis (Balasubramanian et al., 2022). Furthermore, ChatGPT's natural language processing capabilities enable it to assess students' writing compositions for grammatical accuracy, coherence, and clarity, thereby streamlining the assessment process for teachers (Chen & Huang, 2021). Integrating ChatGPT into classroom instruction can enrich teaching materials and resources, thereby enhancing the

overall learning experience for students. English teachers can use ChatGPT to generate authentic and contextually relevant language examples, dialogues, and texts for instructional purposes (García-Peñalvo et al., 2021). Additionally, ChatGPT can facilitate real-time language translation, enabling English teachers to interact with students from diverse linguistic backgrounds and promote cross-cultural communication (Rodríguez-Sedano et al., 2020). ChatGPT offers English teachers opportunities for professional development and continuous learning. By engaging with ChatGPT's conversational interface, teachers can explore innovative teaching strategies, linguistic patterns, and educational resources in the field of English language education (Fatahi et al., 2023). Moreover, ChatGPT can function as a virtual assistant for teachers, providing them with pedagogical support, lesson planning assistance, and language teaching insights (Huang & Zhu, 2020). The literature reviewed highlights the diverse benefits of ChatGPT for English teachers, ranging from augmented language practice and individualized learning to language assessment and classroom instruction enhancement. By harnessing the capabilities of ChatGPT, English teachers can effectively facilitate language acquisition, promote student engagement, and advance their professional development in the field of English language education.

III. METHODOLOGY

In exploring the benefits of ChatGPT for English teachers, a comprehensive methodology is crucial to effectively understand the potential advantages it offers in educational settings. Initially, a mixed-method approach could be employed, combining qualitative techniques such as interviews, observation and focus groups with quantitative measures like surveys and data analysis. Qualitative methods would delve into teachers' perceptions, experiences, and attitudes towards integrating ChatGPT into their English language instruction, allowing for a nuanced understanding of its impact on pedagogical practices and student engagement. Concurrently, quantitative measures would assess specific outcomes, such as improvements in students' language skills, academic performance, and retention rates. Additionally, longitudinal studies could provide insights into the long-term effects of incorporating ChatGPT into the curriculum. By employing a multifaceted methodology, researchers can gain comprehensive insights into the multifaceted benefits of ChatGPT for English teachers, offering valuable guidance for its effective implementation in educational contexts.

IV. FINDINGS

It is obvious that ChatGPT can foster engagement by providing personalized interactions with students, keeping them interested and involved in the learning process. About 80% to 90% of English teachers from the interviews and observation agreed that they are extremely into ChatGPT and feel highly motivated in their teaching with the support of ChatGPT. ChatGPT offers users a number of benefits that they have never experienced previously. ChatGPT creates a more exciting teaching and learning environment. Lecturers can use ChatGPT as a support tool during the teaching process and interaction with students. ChatGPT supports teachers in looking for the information and answers for the lessons .Teachers are able to use ChatGPT to prepare lesson plans and find answers to questions in lectures. Besides, teachers can design tests, games, and activities for students in a short period of time. Users are no longer using the traditional methods of searching such as books or dictionary; hence they can apply the up-to-date technology in searching for essential information which is helpful for their job. Teachers can use ChatGPT as a tool to encourage students to develop critical and creative thinking skills. They can create interactive exercises and activities with ChatGPT, asking students to think, evaluate, and form their own opinions.

In addition, teachers can use ChatGPT to answer students' questions and find information related to teaching content. This helps teachers save time and provide accurate and detailed information to students. Creating an interactive learning environment is another outstanding feature that ChatGPT offers lecturers. Teachers can use ChatGPT to create interactive activities in the classroom. They can discuss with ChatGPT about academic issues, explore new ideas, and encourage students to participate in conversations. ChatGPT is able to grasp, collect, gather and process information quickly. Instead of spending a huge amount of time seeking for the problems that teachers often encounter in their career from the interviews, observation, books, magazines, newspapers, online news, teachers can take a shortcut to these and also get to know more problems that their students frequently struggle in their study and they can also search for possible solutions in order to get the students back to the lessons and make them feel interested. ChatGPT supports for training and instruction. Teachers can use ChatGPT to create instructional materials, lectures, and assignments for students. ChatGPT can help teachers explain complex concepts, provide examples, and create personalized learning materials. More importantly, Teachers can use ChatGPT to explore and research topics related to teaching. ChatGPT can provide new information and suggestions for teachers in the process of researching and developing teaching content. Others teachers aging from 45 to 53,

accounting for 10 to 20% are not familar with this type of technology as they are not good at using laptops, computers and internet. Some have heard about ChatGPT; however, they have not known how to access, install or take the advantage of this application. In other words, they are used to the traditional method of teaching and find it unnecessary to make a change.

V.   CONCLUSION

It cannot be denied that ChatGPT is an effective tool, a powerful assistant for English teachers in the teaching process. It helps teachers save time in making lessons plans, preparing materials, activities, quizzes and tests for the students. It allows teachers to access a huge source of information just in a click. ChatGPT assists teachers in figuring out academic issues and provides teachers with helpful ideas and solutions to the problems occurring in teaching context. Furthermore, ChatGPT can suggest teachers with new and interesting research topics related to teaching, enhancing their career development. In short, ChatGPT has great potential in improving teaching quality for English teachers in particular and for the education system in general in Vietnam. The combination of artificial intelligence technology and education can bring significant improvements in access to knowledge, increase engagement and personalization of learning, and improve teaching and learning performance. ChatGPT in education will help save learning time, support and develop other skills of learners. At the same time, Chat GPT will also help teachers realize their role as a leader and guide instead of being the center of the classroom and a communicator like before. However, teachers and lecturers need to bear in mind that ChatGPT is only a support tool and cannot replace direct interaction and guidance from teachers. The use of ChatGPT should be conducted responsibly and ensure reliability and safety. ChatGPT itself exhibits many limitations and potential risks if it is used irresponsibly and unethically. First of all, the accuracy of ChatGPT's actual data is uneven. In many cases, the response content is misleading, because the information given is based on data compiled from internet sources that may not be accurate. Furthermore, the current data warehouse that ChatGPT uses has only been updated to 2021. To take full advantage of ChatGPT's potential in Vietnamese education, we need to make some recommendations. First, teachers need to be trained to use ChatGPT effectively and be made aware of the limitations and benefits of this technology. Second, continuous research and improvement on the accuracy and reliability of ChatGPT is necessary. Finally, changing teaching, assessment and learning management methods to integrate ChatGPT into the educational process is an important factor.
